## Change Log

Date	Change Description
2015-05-14	Initial release.
2015-09-04	Updated for 5.2.3.
2015-09-23	Updated for 5.2.4.
2016-01-23	Updated for 5.2.5.
2016-03-17	Updated for 5.2.6.
2016-04-22	Updated for 5.2.7.
2016-09-21	Updated for 5.2.9.
2017-01-12	Updated for 5.2.10

# Introduction

FortiAnalyzer 5.2 includes a web services interface that facilitates integration with provision systems.

This guide describes how to use the XML-based FortiAnalyzer Application Programming Interface (API) to obtain information from the FortiAnalyzer unit, run scripts to modify device configurations, and install modified configurations to managed devices.

# What's New in FortiAnalyzer 5.2

## Changes in FortiAnalyzer 5.2.10

No new elements were added or changed in FortiAnalyzer 5.2.10.

## Changes in FortiAnalyzer 5.2.9

No new elements were added or changed in FortiAnalyzer 5.2.9.

## Changes in FortiAnalyzer 5.2.8

No new elements were added or changed in FortiAnalyzer 5.2.8.

## Changes in FortiAnalyzer 5.2.7

No new elements were added or changed in FortiAnalyzer 5.2.7.

## Changes in FortiAnalyzer 5.2.6

No new elements were added or changed in FortiAnalyzer 5.2.6.

## Changes in FortiAnalyzer 5.2.5

No new elements were added or changed in FortiAnalyzer 5.2.5.

## Changes in FortiAnalyzer 5.2.4

No new elements were added or changed in FortiAnalyzer 5.2.4.

## Changes in FortiAnalyzer 5.2.3

No new elements were added or changed in FortiAnalyzer 5.2.3.

## Changes in FortiAnalyzer 5.2.2

The following elements have been added in FortiAnalyzer 5.2.2:

- addPolicyPackage
- assignGlobalPolicy

## Changes in FortiAnalyzer 5.2.1

The following element changes have been made in FortiAnalyzer 5.2.1:

- runFazReport
- Add filters to generate per user reports.

# Using the FortiAnalyzer API

The FortiAnalyzer enables you to configure managed FortiGate devices through a web services interface.

This sections includes the following topics:

- [Connecting to FortiAnalyzer web services](#)
- [Getting information from the FortiAnalyzer unit](#)
- [SOAP error codes and descriptions](#)

## Connecting to FortiAnalyzer web services

### Enabling web services

Web services must be enabled on the network interface that the client will connect to.

**To enable web services on an interface with the GUI:**

1. Go to *System Settings > Network > Interface*.
2. Select the *Edit* icon for the interface that you need to enable web services on.

The screenshot displays the FortiGate GUI configuration for a network interface named 'port1'. The interface is configured with IP/Netmask '192.168.1.94/255.255.255.0' and IPv6 Address ':::/0'. In the 'Administrative Access' section, 'Web Service' is checked, along with 'HTTPS', 'SSH', 'HTTP', 'TELNET', and 'PING'. The 'IPv6 Administrative Access' section is currently unchecked. The 'Default Gateway' is set to '192.168.1.254'. Below the interface configuration, the 'DNS' section shows 'Primary DNS Server' as '208.91.112.53' and 'Secondary DNS Server' as '208.91.112.63'.

3. In the *Administrative Access* section, select *Web Service*.
4. Select *OK* to apply the changes.

**To enable web services on an interface using the CLI:**

Enter the following command line interface (CLI) commands:

```
config system interface
  edit <port>
    set allowaccess webservice
  end
end
```

where `<port>` is the network interface that you want to use for web services.

The `allowaccess` command should also include the other types of administrative access that you want to permit. For example, to allow HTTPS, SSH, and Web Services, enter the CLI command `set allowaccess https ssh webservice`.

The FortiAnalyzer unit handles web services requests on port 8080.

---

## Obtaining the WSDL file

You can download the WSDL file from the GUI, or directly from your FortiAnalyzer at the following URL:  
`https://<FortiAnalyzer_ip_address>:8080/`

### To download the WSDL file using the GUI:

1. Go to *System Settings > Advanced > Advanced Settings*
2. Click the *Download WSDL file* icon.
3. Save the `xml.wsdl` file to your local hard disk drive. You can open this file using a text editor.

By using a web testing tool, such as SoapUI, you can get information from your FortiAnalyzer.

---

## Getting information from the FortiAnalyzer unit

To work with your managed devices, you need to obtain information from your FortiAnalyzer unit, such as:

- a list of ADOMs
- information about the managed devices
- information about individual devices
- the current configuration of devices, according to the database
- the revision history of devices.

## SOAP error codes and descriptions

- `SOAP_ERROR_OK = 0`, /\* same with `SOAP_OK` \*/
- `SOAP_ERROR_DEFAULT_ZONE = -100`, /\* This is obsoleted \*/
- `SOAP_ERROR_INVALID_PARAM = -101`, /\* invalid parameter(s) \*/
- `SOAP_ERROR_PREPARE_PROBLEM = -102`, /\* prepare problem(s) \*/
- `SOAP_ERROR_NOT_SUPPORTED = -103`, /\* not supported \*/
- `SOAP_ERROR_FUNC_PROBLEM = -104`, /\* function problem \*/

- SOAP\_ERROR\_WRONG\_CONDITION = -105, /\* wrong condition(s) \*/
- SOAP\_ERROR\_MEMORY\_LIMIT = -106, /\* not enough memory \*/

Besides the *errorMsg* response, there could be errors returned in <SOAP-ENV:Fault> envelope as well. These are considered generic SOAP errors. There are also cases in which errors from the FortiAnalyzer application level are returned inside <SOAP-ENV:Fault> envelope. These errors are free-style; there are no error codes associated with them.

For example:

```
<SOAP-ENV:Fault>
  <faultcode>SOAP-ENV:Client</faultcode>
  <faultstring>Invalid admin uesr name '(null)'<</faultstring>
  <detail>
    <error xmlns="http://localhost/">Invalid admin user name '(null)'<</error>
  </detail>
</SOAP-ENV:Fault>
```

# FortiAnalyzer XML API elements

## addAdom

Use this request to add an ADOM to your FortiManager unit.

### Example request:

```
<soapenv:Header/>
<soapenv:Body>
  <r20:addAdom>
    <!--Optional:-->
    <servicePass>
      <!--Optional:-->
      <userID?></userID>
      <!--Optional:-->
      <password?></password>
    </servicePass>
    <name?></name>
    <version?></version>
    <mr?></mr>
    <!--Optional:-->
    <isBackupMode?></isBackupMode>
    <!--Optional:-->
    <VPNManagement?></VPNManagement>
    <!--Zero or more repetitions:-->
    <deviceSNVdom>
      <!--Optional:-->
      <SN?></SN>
      <!--Zero or more repetitions:-->
      <vdomName?></vdomName>
      <!--Zero or more repetitions:-->
      <vdomID?></vdomID>
    </deviceSNVdom>
    <!--Zero or more repetitions:-->
    <deviceIDVdom>
      <!--Optional:-->
      <ID?></ID>
      <!--Zero or more repetitions:-->
      <vdomName?></vdomName>
      <!--Zero or more repetitions:-->
      <vdomID?></vdomID>
    </deviceIDVdom>
  </r20:addAdom>
</soapenv:Body>.
```

Request Field	Description
<userID>	The administrator user name.

Request Field	Description
<password>	Administrator password options: Enter the administrator password or leave field blank for no password.
<name>	The name of the ADOM to be created.
<version>	Firmware version options: <ul style="list-style-type: none"> <li>400: FortiOS version 4.0.</li> <li>500: FortiOS version 5.0.</li> </ul>
<mr>	The firmware major release version.
<isBackupMode>	Backup Mode ADOM options: <ul style="list-style-type: none"> <li>true: BackupMode is enabled.</li> <li>false: BackupMode is disabled.</li> </ul>
<VPNManagement>	VPN console ADOM options: <ul style="list-style-type: none"> <li>true: VPN console is enabled.</li> <li>false: VPN console is disabled.</li> </ul>
<deviceSNVdom>	XML structure consists of serial number, VDOM name, and VDOM ID variables.
<SN>	Serial number of device.
<vdomName>	The name of the VDOM.
<vdomID>	The VDOM identifier.
<deviceIDVdom>	XML structure consists of device ID, VDOM name, and VDOM identifier variables.
<ID>	The VDOM ID.
<vdomName>	The name of the VDOM.
<vdomID>	The VDOM identifier.

The response indicates if the request was successful or if it failed.

#### Example response:

```

<SOAP-ENV:Header/>
<SOAP-ENV:Body>
  <ns3:addAdomResponse>
    <errorMsg>
      <errorCode>0</errorCode>
      <errorMsg>Add members to adom test successfully</errorMsg>
    </errorMsg>
  </ns3:addAdomResponse>
</SOAP-ENV:Body>

```

Response Field	Description
<errorMsg>	Indicates if the request was successful or if it failed. The error message consists of the error code and details.
<errorCode>	Error code and message details: <ul style="list-style-type: none"> <li>0: Added members to the ADOM successfully.</li> <li>-101: The user does not have permission to run this command. Cannot get ADOM OID.</li> <li>-102: The global workspace is locked. Cannot get ADOM detail information.</li> <li>-104: Cannot get ADOM detail information.</li> <li>-106: Not enough memory.</li> </ul>
<errorMsg>	

## addDevice

Use this request to add a device to your FortiManager unit.

### Example request:

```
<soapenv:Header/>
<soapenv:Body>
  <r20:addDevice>
    <!--Optional:-->
    <servicePass>
      <!--Optional:-->
      <userID>admin</userID>
      <!--Optional:-->
      <password></password>
    </servicePass>
    <!--Optional:-->
    <adom>root</adom>
    <!--Optional:-->
    <ip>1.1.1.1</ip>
    <!--Optional:-->
    <autod>manual</autod>
    <!--Optional:-->
    <deviceType>FortiGate</deviceType>
    <!--Optional:-->
    <name>test</name>
    <!--Optional:-->
    <adminUser>admin</adminUser>
    <!--Optional:-->
    <password></password>
    <!--Optional:-->
    <version>500</version>
    <!--Optional:-->
    <mr>0</mr>
    <!--Optional:-->
    <model>FortiGate-VM</model>
    <!--Optional:-->
    <flags></flags>
```

```

    <!--Optional:-->
    <description>sss</description>
    <!--Optional:-->
    <devId></devId>
    <!--Optional:-->
    <SN>FGVM001</SN>
    <!--Optional:-->
    <SNprefix>FGVM00</SNprefix>
  </r20:addDevice>
</soapenv:Body>

```

Request Field	Description
<servicepass>	XML structure consists of username and password variables.
<userID>	The administrator user name.
<password>	Administrator password options: Enter the administrator password or leave field blank for no password.
<adom>	If the ADOM field is blank, the default ADOM will be that of the administrative user. If this administrator binds to all ADOMs, then the ADOM is root.
<ip>	The device IP address.
<autod>	autod options: <code>true</code> , <code>false</code> , <code>manual</code> , or <code>unreg</code> Select if you want to enable auto discovery. The default value is <code>False</code> . Select the value <code>unreg</code> to promote an unregistered device.
<deviceType>	Select the type of device. The device type can be: FortiGate, FortiCarrier, or FortiSwitch.
<name>	The host name of the device.
<adminUser>	The administrator user name.
<password>	Administrator password options: Enter the administrator password or leave field blank for no password.
<version>	Firmware version options: <ul style="list-style-type: none"> <li>400: FortiOS version 4.0.</li> <li>500: FortiOS version 5.0.</li> </ul>
<mr>	The firmware major release version.
<model>	The device model number, FGT-60C, for example.

Request Field	Description
<flags>	Flags options: <ul style="list-style-type: none"><li>harddisk: The device has a hard disk installed.</li><li>No value: Leave this field blank if the device does not have a hard disk installed.</li></ul>
<description>	The device description (optional).
<devId>	The device identifier.
<SN>	The device serial number.
<SNprefix>	The device serial number prefix.

The response is a series of <return> tags, each containing information about the device.

#### Example response:

```
<SOAP-ENV:Header/>
<SOAP-ENV:Body>
  <ns3:addDeviceResponse>
    <errorMsg>
      <errorCode>0</errorCode>
      <errorMsg>Read task ID 10 to get addDevice result</errorMsg>
    </errorMsg>
    <taskId>10</taskId>
  </ns3:addDeviceResponse>
</SOAP-ENV:Body>
```

Response Field	Description
<errorMsg>	Indicates if the request was successful or if it failed. The error message consists of the error code and detail.

Response Field	Description
<errorCode>	Error code and message details: <ul style="list-style-type: none"> <li>0: Read task ID to get add device result.</li> <li>-101: The device IP cannot be empty. The device name must be input. Administrator user must be input. Unknown device type; only accepts FortiGate, FortiCarrier, or FortiSwitch. The device firmware version (400, or 500) must be input. The device version should be 400 or 500 value is invalid. The device version mr (0, 1, etc...) must be input. The device version major release is invalid. The device model (FortiGate-200B, FortiWiFi-60C, etc...) must be input. The device model is invalid. The device ID must be set when promoting an unregistered device. Promotable device does not exist. The device is not an unregistered device.</li> <li>-102: The ADOM is locked.</li> <li>-103: Add device auto discovery mode is not supported yet.</li> <li>-104: Add device by IP in ADOM failed. Promote device by device ID in ADOM failed.</li> </ul>
<errorMsg>	
<taskid>	

## deleteAdom

Use this request to delete an ADOM from your FortiManager unit.

### Example request:

```

<soapenv:Header/>
<soapenv:Body>
  <r20:deleteAdom>
    <servicePass>
      <userID?></userID>
      <password?></password>
    </servicePass>
    <adomName?></adomName>
    <adomOid?></adomOid>
  </r20:deleteAdom>
</soapenv:Body>

```

Request Field	Description
<servicepass>	XML structure consists of username and password variables.
<userID>	The administrator user name.
<password>	Administrator password options: Enter the administrator password or leave field blank for no password.

Request Field	Description
<adomName>	The name of the ADOM.
<adomOid>	The ADOM object identifier (OID).

The response indicates with the request was successful or if it failed.

#### Example response:

```
<SOAP-ENV:Header/>
<SOAP-ENV:Body>
  <ns3:deleteAdomResponse>
    <errorMsg>
      <errorCode>0</errorCode>
      <errorMsg>Delete adom ID 166 successfully</errorMsg>
    </errorMsg>
  </ns3:deleteAdomResponse>
</SOAP-ENV:Body>
```

Response Field	Description
<errorMsg>	Indicates if the request was successful or if it failed. The error message consists of the error code and detail.
<errorCode>	Error code and message details: <ul style="list-style-type: none"> <li>0: Deleted ADOM ID successfully.</li> <li>-101: The ADOM name is invalid. Cannot get a valid ADOM ID. Invalid ADOM.</li> </ul>
<errorMsg>	<ul style="list-style-type: none"> <li>-102: The ADOM is locked. The global workspace is locked.</li> <li>-104: The ADOM ID cannot be deleted.</li> <li>-105: The root ADOM cannot be deleted. The ADOM ID is in use and cannot be deleted.</li> </ul>

## deleteDevice

Use this request to delete a device defined on your FortiManager unit.

#### Example request:

```
<soapenv:Header/>
<soapenv:Body>
  <r20:deleteDevice>
    <servicePass>
      <password></password>
      <userID>admin</userID>
    </servicePass>
    <devId>468985</devId>
    <serialNumber>FGT60C3G06500185</serialNumber>
  </r20:deleteDevice>
</soapenv:Body>
```

Request Field	Description
<servicePass>	XML structure consists of username and password variables.
<userID>	The administrator user name.
<password>	Administrator password options: Enter the administrator password or leave field blank for no password.
<devId>	The device ID number.
<serialNumber>	The serial number of device.

The response indicates if the device was deleted successfully or if the procedure failed.

#### Example response:

```
<SOAP-ENV:Header/>
<SOAP-ENV:Body>
  <ns3:deleteDeviceResponse>
    <errorMsg>
      <errorCode>0</errorCode>
      <errorMsg>Delete device ID 468985 successfully</errorMsg>
    </errorMsg>
  </ns3:deleteDeviceResponse>
</SOAP-ENV:Body>
```

Response Field	Description
<errorMsg>	Indicates if the request was successful or if it failed. The error message consists of the error code and detail.
<errorCode>	Error code and message details: <ul style="list-style-type: none"> <li>0: Read task ID to get delete device result.</li> <li>-102: The ADOM is locked.</li> <li>-104: The device can only be deleted from the ADOM which contains its root VDOM. The device ID cannot be deleted.</li> <li>-105: The device ID is in use and cannot be deleted. The device ID was locked and cannot be deleted.</li> </ul>
<errorMsg>	

## editAdom

Use this request to edit an ADOM.

#### Example request:

```
<soapenv:Header/>
<soapenv:Body>
  <r20:editAdom>
    <!--Optional:-->
    <servicePass>
```

```

        <!--Optional:-->
        <userID?></userID>
        <!--Optional:-->
        <password?></password>
    </servicePass>
    <name?></name>
    <!--Optional:-->
    <version?></version>
    <!--Optional:-->
    <mr?></mr>
    <!--Optional:-->
    <state?></state>
    <!--Optional:-->
    <isBackupMode?></isBackupMode>
    <!--Optional:-->
    <VPNManagement?></VPNManagement>
    <!--Optional:-->
    <metafields>
        <!--Zero or more repetitions:-->
        <metafield>
            <name?></name>
            <value?></value>
        </metafield>
    </metafields>
    <!--Zero or more repetitions:-->
    <addDeviceSNVdom>
        <!--Optional:-->
        <SN?></SN>
        <!--Zero or more repetitions:-->
        <vdomName?></vdomName>
        <!--Zero or more repetitions:-->
        <vdomID?></vdomID>
    </addDeviceSNVdom>
    <!--Zero or more repetitions:-->
    <addDeviceIDVdom>
        <!--Optional:-->
        <ID?></ID>
        <!--Zero or more repetitions:-->
        <vdomName?></vdomName>
        <!--Zero or more repetitions:-->
        <vdomID?></vdomID>
    </addDeviceIDVdom>
</r20:editAdom>
</soapenv:Body>

```

Request Field	Description
<servicePass>	XML structure consists of username and password variables.
<userID>	The administrator user name.
<password>	Administrator password options: <ul style="list-style-type: none"> <li>• Enter the administrator password</li> <li>• Leave field blank for no password</li> </ul>

Request Field	Description
<name>	The name of the ADOM to be edited.
<version>	Firmware version options: <ul style="list-style-type: none"> <li>400: FortiOS version 4.0.</li> <li>500: FortiOS version 5.0.</li> </ul>
<mr>	The firmware major release version.
<state>	Device ADOM state options: <ul style="list-style-type: none"> <li>true: ADOMs are enabled</li> <li>false: ADOMs are disabled</li> </ul>
<isBackupMode>	Backup Mode ADOM options: <ul style="list-style-type: none"> <li>true: BackupMode is enabled.</li> <li>false: BackupMode is disabled.</li> </ul>
<VPNManagement>	VPN console ADOM options: <ul style="list-style-type: none"> <li>true: VPN console is enabled.</li> <li>false: VPN console is disabled.</li> </ul>
<metafields>	XML structure consists of metafield data. These strings occur in pairs in XML responses.
<name>	Name of device metafield (s).
<value>	Value of device metafield (s).
<addDeviceSNVdom>	XML structure consists of serial number, VDOM name, and VDOM ID variables.
<SN>	Serial number of device, FGT60C3G06500185, for example.
<vdomName>	The name of the VDOM.
<vdomID>	The VDOM identifier.
<addDeviceIDVdom>	XML structure consists of the device ID, VDOM name, and VDOM ID variables.
<ID>	The ID of the device.
<vdomName>	The name of the VDOM.
<vdomID>	The VDOM identifier.

The response indicates if the request was successful or if it failed.

**Example response:**

```

<SOAP-ENV:Header/>
<SOAP-ENV:Body>
  <ns3:editAdomResponse>
    <errorMsg>
      <errorCode>0</errorCode>
      <errorMsg>Edit adom root successfully</errorMsg>
    </errorMsg>
  </ns3:editAdomResponse>
</SOAP-ENV:Body>

```

Response Field	Description
<errorMsg>	Indicates if the request was successful or if it failed. The error message consists of the error code and detail.
<errorCode>	Error code and message details: <ul style="list-style-type: none"> <li>0: Edited ADOM name successfully.</li> <li>-101: The ADOM name cannot be empty. The ADOM name is invalid. Version only accepts 400 or 500 values. Invalid major release value. The ADOM metafield does not exist. The metafield name does not exist. Failed to change ADOM information.</li> </ul>
<errorMsg>	<ul style="list-style-type: none"> <li>-102: The global workspace is locked. Failed to get ADOM information. Failed to get ADOM flags. Failed to create device fetch. Cannot change mode to backup mode since the ADOM has device(s). Cannot get ADOM metafields.</li> <li>-104: Adding members to ADOM failed.</li> </ul>

## getAdomList

Use this request to get a list of the ADOMs defined on your FortiManager unit. Only an administrator with the `Super_User` profile can run this command.

**Example request:**

```

<soapenv:Header/>
<soapenv:Body>
  <r20:getAdomList>
    <!--Optional:-->
    <servicePass>
      <!--Optional:-->
      <userID>?</userID>
      <!--Optional:-->
      <password>?</password>
    </servicePass>
    <!--Optional:-->
    <detail>?</detail>
  </r20:getAdomList>
</soapenv:Body>

```

Request Field	Description
<servicePass	XML structure consists of username and password variables.
<userID>	The administrator user name.
<password>	Administrator password options: <ul style="list-style-type: none"> <li>• Enter the administrator password</li> <li>• Leave field blank for no password</li> </ul>
<detail>	Detail field options: true or false

The response is a series of <return> tags, each containing information about an ADOM.

### Example response: detail is true

```

<SOAP-ENV:Header/>
<SOAP-ENV:Body>
  <ns3:getAdomListResponse>
    <errorMsg>
      <errorCode>0</errorCode>
      <errorMsg>get adom detail list successfully</errorMsg>
    </errorMsg>

Response Field	Description
<errorMsg>	Indicates if the request was successful or if it failed. The error message consists of the error code and detail.
<errorCode>	Error code and message details: <ul style="list-style-type: none"> <li>0: Retrieved ADOM list successfully. Retrieved ADOM detail list successfully.</li> </ul>
<errorMsg>	<ul style="list-style-type: none"> <li>-104: ADOM fetch error. Cannot get ADOM basic information. Cannot get ADOM detail information.</li> <li>-106: Not enough memory.</li> </ul>
<adomDetail>	XML structure consists of the object identifier, ADOM name, and description.
<oid>	The object identifier.
<name>	The ADOM name.
<description>	A description of the ADOM.
<version>	Firmware version options: <ul style="list-style-type: none"> <li>400: FortiOS version 4.0.</li> <li>500: FortiOS version 5.0.</li> </ul>
<mr>	The firmware major release version.
<state>	Device ADOM state options: <ul style="list-style-type: none"> <li>true: ADOMs are enabled.</li> <li>false: ADOMs are disabled.</li> </ul>
<isBackupMode>	Backup Mode ADOM options: <ul style="list-style-type: none"> <li>true: BackupMode is enabled.</li> <li>false: BackupMode is disabled.</li> </ul>
<VPNManagement>	VPN console ADOM options: <ul style="list-style-type: none"> <li>true: VPN console is enabled.</li> <li>false: VPN console is disabled.</li> </ul>
<metafield>	XML structure consists of metafield data. These strings occur in pairs in XML responses.
<name>	Name of device metafield (s).
<value>	Value of device metafield (s).

## getAdoms

Use this request to get a list of ADOMs.

### Example request:

```
<soapenv:Header/>
<soapenv:Body>
  <r20:getAdoms>
    <!--Optional:-->
    <servicePass>
      <!--Optional:-->
      <userID?></userID>
      <!--Optional:-->
      <password?></password>
    </servicePass>
    <!--Zero or more repetitions:-->
    <names?></names>
    <!--Zero or more repetitions:-->
    <adomIds?></adomIds>
  </r20:getAdoms>
</soapenv:Body>
```

Request Field	Description
<servicePass>	XML structure consists of username and password variables.
<userID>	The administrator user name.
<password>	Administrator password options: <ul style="list-style-type: none"> <li>Enter the administrator password.</li> <li>Leave field blank for no password.</li> </ul>
<names>	The ADOM name.
<adomIDs>	The ADOM object ID.

The response indicates if the request was successful or if it failed.

### Example response:

```
<SOAP-ENV:Header/>
<SOAP-ENV:Body>
  <ns3:getAdomsResponse>
    <errorMsg>
      <errorCode>0</errorCode>
      <errorMsg>Get adoms info Successfully</errorMsg>
    </errorMsg>
    <adomDetail>
      <oid>3</oid>
      <name>root</name>
      <description/>
      <version>5</version>
```

```

    <mr>0</mr>
    <state>true</state>
    <isBackupMode>false</isBackupMode>
    <VPNManagement>true</VPNManagement>
  <metafields>
    <metafield>
      <name>metal</name>
      <value/>
    </metafield>
  </metafields>
</adomDetail>
</ns3:getAdomsResponse>
</SOAP-ENV:Body>

```

Response Field	Description
<errorMsg>	Indicates if the request was successful or if it failed. The error message consists of the error code and detail.
<errorCode>	Error code and message details: <ul style="list-style-type: none"> <li>0: Retrieved ADOM information successfully.</li> <li>-101: Invalid admin user name. User does not have permission to run this command. Cannot get ADOM OID.</li> </ul>
<errorMsg>	<ul style="list-style-type: none"> <li>-102: Cannot get ADOM detail information.</li> <li>-104: Cannot get ADOM detail information.</li> <li>-106: Not enough memory.</li> </ul>
<adomDetail>	XML structure consists of the object identifier, ADOM name, description, firmware version, and major release.
<oid>	The object identifier for the ADOM.
<name>	The name of the ADOM.
<description>	A description of the ADOM.
<version>	Firmware version options: <ul style="list-style-type: none"> <li>400: FortiOS version 4.0.</li> <li>500: FortiOS version 5.0.</li> </ul>
<mr>	The firmware major release version.
<state>	Device ADOM state options: <ul style="list-style-type: none"> <li>true: ADOMs are enabled.</li> <li>false: ADOMs are disabled.</li> </ul>
<isBackupMode>	Backup Mode ADOM options: <ul style="list-style-type: none"> <li>true: BackupMode is enabled.</li> <li>false: BackupMode is disabled.</li> </ul>

Response Field	Description
<VPNManagement>	VPN console ADOM options: <ul style="list-style-type: none"> <li>true: VPN console is enabled.</li> <li>false: VPN console is disabled.</li> </ul>
<metafield>	XML structure consists of metafield data. These strings occur in pairs in XML responses.
<name>	Name of device metafield (s).
<value>	Value of device metafield (s).

## getDeviceList

Use this request to get summary information about the managed devices, optionally limited to a particular ADOM.

### Example request:

```
<soapenv:Header/>
<soapenv:Body>
  <r20:getDeviceList>
    <!--Optional:-->
    <servicePass>
      <!--Optional:-->
      <userID>?</userID>
      <!--Optional:-->
      <password>?</password>
    </servicePass>
    <!--Optional:-->
    <adom>?</adom>
    <!--Optional:-->
    <detail>?</detail>
  </r20:getDeviceList>
</soapenv:Body>
```

Request Field	Description
<servicePass>	XML structure consists of username and password variables.
<userID>	The administrator user name.
<password>	Administrator password options: <ul style="list-style-type: none"> <li>Enter the administrator password.</li> <li>Leave field blank for no password.</li> </ul>

Request Field	Description
<adom>	If the ADOM field is blank, the default ADOM will be that of the administrative user. If this administrator binds to all ADOMs, then the ADOM is root.
<detail>	Detail field options: true, or false

The response is a series of <return> tags, each containing information about a device.

#### Example response: (detail is true)

```
<SOAP-ENV:Header/>
<SOAP-ENV:Body>
  <ns3:getDeviceListResponse>
    <errorMsg>
      <errorCode>0</errorCode>
      <errorMsg>get device detail list successfully</errorMsg>
    </errorMsg>
    <deviceDetail>
      <devId>129</devId>
      <firmware>FortiGate</firmware>
      <firmwareVersion>5</firmwareVersion>
      <buildNum>128</buildNum>
      <description/>
      <hostname>FGT60C3G06500185</hostname>
      <platform>FortiGate-60C</platform>
      <sn>FGT60C3G06500185</sn>
      <ip>10.2.60.99</ip>
      <IPSCContract>3.00249 (2012-10-11 02:47)</IPSCContract>
      <antiVirusContract>16.00560 (2012-10-19 08:31)</antiVirusContract>
      <appsignature/>
      <mgmtMode>reg</mgmtMode>
    </deviceDetail>
  </ns3:getDeviceListResponse>
</SOAP-ENV:Body>
```

#### Example response: (detail is false)

```
<SOAP-ENV:Header/>
<SOAP-ENV:Body>
  <ns3:getDeviceListResponse>
    <errorMsg>
      <errorCode>0</errorCode>
      <errorMsg>get device list successfully</errorMsg>
    </errorMsg>
    <deviceInfo>
      <devId>129</devId>
      <firmware>FortiGate</firmware>
      <firmwareVersion>5</firmwareVersion>
      <buildNum>128</buildNum>
      <description/>
      <hostname>FGT60C3G06500185</hostname>
      <platform>FortiGate-60C</platform>
      <sn>FGT60C3G06500185</sn>
```

```

        <ip>10.2.60.99</ip>
      </deviceInfo>
    </ns3:getDeviceListResponse>
  </SOAP-ENV:Body>

```

Response Field	Description
<errorMsg>	Indicates if the request was successful or if it failed. The error message consists of the error code and detail.
<errorCode>	Error code and message details: <ul style="list-style-type: none"> <li>0: Retrieved device list successfully. Retrieved device detail list successfully.</li> </ul>
<errorMsg>	<ul style="list-style-type: none"> <li>-102: Device fetch error for ADOM.</li> <li>-104: Cannot get device detail information.</li> </ul>
<deviceDetail>	XML structure consists of the following tags.
<devID>	The Device ID. This is the primary device identifier.
<firmware>	FortiGate, FortiCarrier, or FortiSwitch
<firmwareVersion>	Version of device operating system, 5, for example for FortiOS 5.0.
<buildNum>	Firmware version build number, 0128, for example.
<description>	Device description from FortiManager database.
<hostname>	The device host name.
<platform>	Platform name for device, FortiGate-60C, for example.
<sn>	Serial number of device, FGT60C3G06500185, for example.
<ip>	IP address of device network interface from which response was received.
<IPSCContract>	FortiGuard IPS definitions version and last update time, 2.00461(2008-12-08 11:23), for example.
<antiVirusContract>	AV contract and expiry date, 8.00631(2012-02-15 14:27), for example.
<appsSignature>	FortiGuard application signature.
<mgmtMode>	The device management mode. One of the following: <ul style="list-style-type: none"> <li>reg: Registered device</li> <li>unreg: Unregistered device</li> <li>unknown: Device registration status is unknown.</li> </ul>

## getDevices

Use this request to get information about specific managed devices, identified by serial number or device ID. You can obtain device ID values by using the `execute dmserver showdev` CLI command.

If you want information about the device's configuration, see [getFazConfig](#) on page 36.

### Example request:

```
<soapenv:Header/>
<soapenv:Body>
  <r20:getDevices>
    <servicePass>
      <password></password>
      <userID>admin</userID>
    </servicePass>
    <serialNumbers>FGT60C3G06500185</serialNumbers>
    <serialNumbers>FGT60C3G06500186</serialNumbers>
  </r20:getDevices>
</soapenv:Body>
```

Request Field	Description
<servicePass>	XML structure consists of username and password variables.
<userID>	The administrator user name.
<password>	Administrator password options: <ul style="list-style-type: none"> <li>Enter the administrator password.</li> <li>Leave field blank for no password.</li> </ul>
<serialNumbers>	Serial number of the device. This is the secondary identifier. You can enter multiple serial numbers fields.
<devlds>	Device ID. This is the primary device identifier. You can omit this field and use the serial number instead. You can enter multiple device ID fields.

The response is a series of <return> tags, each containing information about a device.

### Example response:

```
<SOAP-ENV:Header/>
<SOAP-ENV:Body>
  <ns3:getDevicesResponse>
    <return>
      <firmware>FortiGate</firmware>
      <firmwareVersion>5</firmwareVersion>
      <buildNum>128</buildNum>
      <description/>
      <hostname>Dev3</hostname>
      <IPSContract>2.442 (2012-11-08 11:23)</IPSContract>
      <antiVirusContract>8.368 (2007-11-15 13:59)</antiVirusContract>
      <platform>FortiGate-60C</platform>
```

```

        <sn>FGT60C3G06500185</sn>
        <ip>172.20.120.126</ip>
    </return>
</return>
    <firmware>FortiGate</firmware>
    <firmwareVersion>5</firmwareVersion>
    <buildNum>128</buildNum>
    <description/>
    <hostname>FGT60C3G06500185</hostname>
    <IPSCContract/>
    <antiVirusContract/>
    <platform>Fortigate-60C</platform>
    <sn>FGT60C3G06500186</sn>
    <ip>172.20.120.127</ip>
</return>
</ns3:getDevicesResponse>
</SOAP-ENV:Body>

```

Response Field	Description
<errorMsg>	Indicates if the request was successful or if it failed. The error message consists of the error code and detail.
<errorCode>	Error code and message details: <ul style="list-style-type: none"> <li>0: Retrieved device(s) information successfully.</li> <li>-102: Serial number is not found. Cannot get device information.</li> <li>-104: Cannot get device information.</li> </ul>
<errorMsg>	
<firmware>	One of: <ul style="list-style-type: none"> <li>FortiGate</li> <li>FortiCarrier</li> <li>FortiSwitch</li> </ul>
<firmwareVersion>	Version of device operating system, 500, for example for FortiOS 5.0.
<buildNum>	Firmware version build number, 0128, for example.
<description>	Device description from database.
<hostname>	The device host name.
<IPSCContract>	FortiGuard IPS definitions version and last update time, 2.00461(2012-11-08 11:23), for example.
<antiVirusContract>	AV contract and expiry date, 8.00631(2012-02-15 14:27), for example.
<platform>	Platform name for device, FortiGate-60C, for example.
<sn>	Serial number of device, FGT60C3G06500185, for example.
<ip>	IP address of device network interface from which response was received.

## getDeviceVdomList

Use this request to obtain a list of device VDOMs.

### Example request:

```
<soapenv:Header/>
<soapenv:Body>
  <r20:getDeviceVdomList>
    <!--Optional:-->
    <servicePass>
      <!--Optional:-->
      <userID?></userID>
      <!--Optional:-->
      <password?></password>
    </servicePass>
    <!--Optional:-->
    <devName?></devName>
    <!--Optional:-->
    <devID?></devID>
  </r20:getDeviceVdomList>
</soapenv:Body>
```

Request Field	Description
<password>	Administrator password options: <ul style="list-style-type: none"> <li>Enter the administrator password.</li> <li>Leave field blank for no password.</li> </ul>
<user>	The administrator user name.
<devName>	Name of the device host.
<devId>	The Device ID. This is the primary device identifier.

The response indicates if the request was successful or if it failed.

### Example response:

```
<SOAP-ENV:Header/>
<SOAP-ENV:Body>
  <ns3:getDeviceVdomListResponse>
    <errorMsg>
      <errorCode>0</errorCode>
      <errorMsg>Get device 114 vdom list successfully</errorMsg>
    </errorMsg>
    <name>FGT60C3G06500185</name>
    <oid>114</oid>
    <return>
      <name>root</name>
      <oid>3</oid>
    </return>
  </ns3:getDeviceVdomListResponse>
```

&lt;/SOAP-ENV:Body&gt;

Response Field	Description
<errorMsg>	Indicates if the request was successful or if it failed. The error message consists of the error code and detail.
<errorCode>	Error code and message details: <ul style="list-style-type: none"> <li>0: Retrieved device VDOM list successfully.</li> <li>-101: Cannot find the device by provided name or ID.</li> </ul>
<errorMsg>	
<name>	The name of the VDOM device list.
<oid>	The object identifier.

## getFazArchive

Use this request to get a FortiAnalyzer archive file. You need to input the device ID, archive type and the archive file name.

### Example request:

```
<soapenv:Header/>
<soapenv:Body>
  <r20:getFazArchive>
    <!--Optional:-->
    <servicePass>
      <!--Optional:-->
      <userID>admin</userID>
      <!--Optional:-->
      <password></password>
    </servicePass>
    <!--Optional:-->
    <adom>root</adom>
    <!--Optional:-->
    <devId>FG200B0000000001</devId>
    <type>IPS</type>
    <!--Optional:-->
    <fileName>50005:0</fileName>
    <zipPassword></zipPassword>
  </r20:getFazArchive>
</soapenv:Body>
```

Request Field	Description
<servicePass>	XML structure consists of username and password variables.
<userID>	The administrator user name.
<password>	Administrator password options: Enter the administrator password or leave field blank for no password.

Request Field	Description
<adom>	The ADOMs for which you want to get archives from.
<devId>	The device ID you want to get archives from.
<type>	The archive type. Archive type options: <ul style="list-style-type: none"> <li>• 0: Web</li> <li>• 1: Email</li> <li>• 2: FTP</li> <li>• 3: IM</li> <li>• 4: MMS</li> <li>• 5: Quarantine</li> <li>• 6: IPS</li> </ul>
<fileName>	The archive file name. You can check the name under <i>Log View &gt; Archive</i> .
<zipPassword>	The password set for the zip file.
<filelist>	The archive file list.
<filename>	The archive file name will be displayed under this element.
<data>	The archive file content data. The data is base64 encoded, you need to decode the data before use.

The response will contain the binary data if the archive file in a base64 encoded message.

#### Example response:

```
<SOAP-ENV:Header/>
<SOAP-ENV:Body>
  <ns3:getFazArchiveResponse>
    <errorMsg>
      <errorCode>0</errorCode>
      <errorMsg>getFazArchive successfully</errorMsg>
    </errorMsg>
    <fileList>
      <fileName>50005:0</fileName>
      <data>
        =</data>
      <error>None</error>
    </fileList>
  </ns3:getFazArchiveResponse>
</SOAP-ENV:Body>
```

Request Field	Description
<errorMsg>	Indicates if the request was successful or if it failed. The error message consists of the error code and detail.

Request Field	Description
<errorCode>	Error code and message details: <ul style="list-style-type: none"> <li>-101: Invalid username, password, or ADOM. Cannot get device ID. Cannot get file name. Cannot get type. Cannot get checksum. Cannot get content filename.</li> <li>-104: Cannot get content archive. Get FortiAnalyzer archive failed, no such file name. Get FortiAnalyzer archive failed, error reading file name.</li> <li>-106: Not enough memory.</li> </ul>
<errorMsg>	
<filelist>	The archive file list.
<filename>	The archive file name will be displayed under this element.
<data>	The archive file content data. The data is base64 encoded, you need to decode the data before use.

## getFazConfig

Use this request to get the FortiAnalyzer configuration.

### Example request:

```
<soapenv:Header/>
<soapenv:Body>
  <r20:getFazConfig>
    <!--Optional:-->
    <servicePass>
      <!--Optional:-->
      <userID>admin</userID>
      <!--Optional:-->
      <password></password>
    </servicePass>
  </r20:getFazConfig>
</soapenv:Body>
```

Request Field	Description
<servicePass>	XML structure consists of username and password variables.
<userID>	The administrator user name.
<password>	Administrator password options: Enter the administrator password or leave field blank for no password.

The response indicates if the request was successful or if it failed.

### Example response:

```
<SOAP-ENV:Header/>
```

```
<SOAP-ENV:Body>
  <ns3:getFazConfigResponse>
    <errorMsg>
      <errorCode>0</errorCode>
      <errorMsg>getFazConfig successfully</errorMsg>
    </errorMsg>
    <config>#config-version=FAZVM-5.0-FW-build115-130121

Request Field	Description
<errorMsg>	Indicates if the request was successful or if it failed. The error message consists of the error code and detail.

Request Field	Description
<errorCode>	Error code and message details: <ul style="list-style-type: none"> <li>-101: Invalid username or password.</li> <li>-102: Cannot allocate temp file. Cannot create configuration file. Cannot open file.</li> <li>-106: Not enough memory.</li> </ul>
<errorMsg>	
<config>	
	The device configuration.

## getFazGeneratedReports

Use this request to get a completed historical report. To use this command, you need to input the report name, report date, compression method in the request.

### Example request:

```

<soapenv:Header/>
<soapenv:Body>
  <r20:getFazGeneratedReport>
    <!--Optional:-->
    <servicePass>
      <!--Optional:-->
      <userID>admin</userID>
      <!--Optional:-->
      <password></password>
    </servicePass>
    <!--Optional:-->
    <adom>root</adom>
    <!--Optional:-->
    <reportDate>2013_01_24</reportDate>
    <!--Optional:-->
    <reportName>S-4_t4-2013-01-24-1611</reportName>
    <!--Optional:-->
    <compression>tar</compression>
  </r20:getFazGeneratedReport>
</soapenv:Body>

```

Request Field	Description
<servicePass>	XML structure consists of username and password variables.
<userID>	The administrator user name.
<password>	Administrator password options: Enter the administrator password or leave field blank for no password.
<adom>	The ADOMs for which you want to get a report from.

Request Field	Description
<reportDate>	The report generation date; in the format YYYY_MM_DD.
<reportName>	The generated report name. For example, S-schedule-utm-reports_t1-2013-01-24-1022.
<compression>	The compression type of the report that will be returned by this command. Compression options include: <ul style="list-style-type: none"> <li>0: tar</li> <li>1: gzip</li> </ul>

The report data returned in the response message is base64 encoded binary data. You need to decode it and then decompress it to get the report files.

#### Example response:

```
<SOAP-ENV:Header/>
<SOAP-ENV:Body>
  <ns3:getFazGeneratedReportResponse>
    <errorMsg>
      <errorCode>0</errorCode>
      <errorMsg>getFazGeneratedReport successfully</errorMsg>
    </errorMsg>
    <reportName>S-4_t4-2013-01-24-1611</reportName>
    <size>71680</size>
    <fazReportData>
      <reportContent>
        </fazReportData>
      </ns3:getFazGeneratedReportResponse>
    </SOAP-ENV:Body>
```

Request Field	Description
<errorMsg>	Indicates if the request was successful or if it failed. The error message consists of the error code and detail.
<errorCode>	Error code and message details: <ul style="list-style-type: none"> <li>-101: Invalid username, password, or ADOM. Cannot get report name. Cannot get report date.</li> </ul>
<errorMsg>	<ul style="list-style-type: none"> <li>-104: Cannot find report name. Cannot find file in directory. Cannot read file in directory.</li> <li>-106: Not enough memory.</li> </ul>
<reportName>	The generated report name. For example, S-schedule-utm-reports_t1-2013-01-24-1022.
<size>	The generated report size.
<fazReportData>	Report content data will be displayed under this element.

Request Field	Description
<reportContent>	Contains the actual report data. The data is base64 encoded, you need to decode the data before use.

## getSystemStatus

Use this request to get system status information in the current system.

### Example request:

```
<soapenv:Header/>
<soapenv:Body>
  <r20:getSystemStatus>
    <!--Optional:-->
    <servicePass>
      <!--Optional:-->
      <userID>admin</userID>
      <!--Optional:-->
      <password></password>
    </servicePass>
    <!--Optional:-->
    <adom>root</adom>
  </r20:getSystemStatus>
</soapenv:Body>
```

Request Field	Description
<servicePass>	XML structure consists of username and password variables.
<userID>	The administrator user name.
<password>	Administrator password options: <ul style="list-style-type: none"><li>• Enter the administrator password.</li><li>• Leave field blank for no password.</li></ul>
<adom>	If the ADOM field is blank, it is assigned as root.

The response indicates if the request was successful or if it failed.

### Example response:

```
<SOAP-ENV:Header/>
<SOAP-ENV:Body>
  <ns3:getSystemStatusResponse>
    <errorMsg>
      <errorCode>0</errorCode>
      <errorMsg>getSystemStatus successfully</errorMsg>
    </errorMsg>
    <platformType>FMG-VM64</platformType>
    <version>v5.0-build0114 130118 (Interim)</version>
    <serialNumber>FMG-VM0A11000137</serialNumber>
```

```

    <biosVersion>04000002</biosVersion>
    <hostName>FMG-VM64</hostName>
    <maxNumAdminDomains>1000000000</maxNumAdminDomains>
    <maxNumDeviceGroup>1000000000</maxNumDeviceGroup>
    <adminDomainConf>Enabled</adminDomainConf>
    <fipsMode>Disabled</fipsMode>
  </ns3:getSystemStatusResponse>
</SOAP-ENV:Body>

```

Response Field	Description
<errorMsg>	Indicates if the request was successful or if it failed. The error message consists of the error code and detail.
<errorCode>	Error code and message details: <ul style="list-style-type: none"> <li>-101: Invalid username, password, or ADOM.</li> </ul>
<errorMsg>	
<platformType>	Device model information.
<version>	The firmware version, v5.0-build0114 130118 (interim) for example.
<serialNumber>	The serial number of the device, FMG-VM0A11000137, for example.
<biosVersion>	The BIOS version of the device.
<hostName>	The device host name.
<maxNumAdminDomains>	The maximum number of ADOMs.
<maxNumDeviceGroup>	The maximum number of device groups.
<adminDomainConf>	ADOM mode status.
<fipsMode>	FIPS mode status.

## getTaskList

Use this request to get a list of tasks as defined on your unit. Only an administrator with the `Super_User` profile can run this command.

### Example request:

```

<soapenv:Header/>
<soapenv:Body>
  <r20:getTaskList>
    <servicePass>
      <password></password>
      <userID>admin</userID>
    </servicePass>
    <adom></adom>
    <taskId>1</taskId>
  </r20:getTaskList>
</soapenv:Body>

```

```

    </r20:getTaskList>
  </soapenv:Body>

```

Request Field	Description
<servicePass>	XML structure consists of username and password variables.
<userID>	The administrator user name.
<password>	Administrator password options: <ul style="list-style-type: none"> <li>• Enter the administrator password.</li> <li>• Leave field blank for no password.</li> </ul>
<adom>	If the ADOM field is blank, the default ADOM will be that of the administrative user. If this administrator binds to all ADOMs, then the ADOM is root.
<taskId>	Indicates the task ID number. If the <waitTask> was false, then the task ID is displayed.

The response is a series of <return> tags, each containing information about a task.

#### Example response:

```

<SOAP-ENV:Header/>
<SOAP-ENV:Body>
  <ns3:getTaskListResponse>
    <errorMsg>
      <errorCode>0</errorCode>
      <errorMsg>Get task ID detail successfully</errorMsg>
    </errorMsg>
    <taskList>
      <taskId>1</taskId>
      <source>5</source>
      <description>system checkpoint task</description>
      <userID>admin</userID>
      <status>4</status>
      <startTime>2012-09-29T15:18:22Z</startTime>
    </taskList>
    <deviceList>
      <devName>create system checkpoint</devName>
      <ip>0.0.0.0</ip>
      <status>4</status>
    </deviceList>
    <message>Create system checkpoint succeed</message>
    <history>
      <name>create system checkpoint</name>
      <percentage>0</percentage>
      <description>task start ...</description>
    </history>
    <history>
      <name>create system checkpoint</name>
      <percentage>5</percentage>
      <description>Lock system succeed</description>
    </history>
    ...
    ...

```

```

        </deviceList>
    </taskList>
</ns3:getTaskListResponse>
</SOAP-ENV:Body>

```

Response Field	Description
<errorMsg>	Indicates if the request was successful or if it failed. The error message consists of the error code and detail.
<errorCode>	Error code and message details: <ul style="list-style-type: none"> <li>• 0: Retrieved task ID detail successfully.</li> <li>• -101: Invalid task ID. The task ID is empty or invalid.</li> </ul>
<errorMsg>	<ul style="list-style-type: none"> <li>• -102: The task ID does not exist.</li> <li>• -106: Not enough memory.</li> </ul>
<taskList>	XML structure consists of the task ID, source, description, user ID, status, and start time variables.
<taskId>	Indicates the task ID number. If the <waitTask> was false, then the task ID is displayed.
<source>	Indicates the source of the task: <ul style="list-style-type: none"> <li>• 0: Device manager</li> <li>• 1: Security console</li> <li>• 2: Copy global object</li> <li>• 3: Install configuration</li> <li>• 4: Script execution</li> <li>• 5: System checkpoint</li> <li>• 6: Import device policy</li> <li>• 7: Install EMS global policy</li> </ul>
<description>	Describes the list.
<userID>	The administrator user name.
<status>	Indicates the status of the task: <ul style="list-style-type: none"> <li>• 1: running</li> <li>• 2: cancelling</li> <li>• 3: cancelled</li> <li>• 4: done</li> <li>• 5: error</li> <li>• 6: aborting</li> <li>• 7: aborted</li> </ul>
<startTime>	Indicates the time the task list started.
<deviceList>	XML structure consists of the device name, IP, status, and description.

Response Field	Description
<devName>	Name of the device host.
<ip>	The device IP address.
<status>	Status of the device.
<message>	Description of the task.
<history>	
<name>	The history name.
<percentage>	Percentage of progress bar of each task that has been applied to the device.
<description>	Description of the history.

## listFazGeneratedReports

Use this request to list FortiAnalyzer generated reports.

### Example request:

```
<soapenv:Header/>
<soapenv:Body>
  <r20:listFazGeneratedReports>
    <!--Optional:-->
    <servicePass>
      <!--Optional:-->
      <userID>admin</userID>
      <!--Optional:-->
      <password></password>
    </servicePass>
    <!--Optional:-->
    <adom>root</adom>
    <!--Optional:-->
    <startDate>2013-02-04T00:00:00</startDate>
    <!--Optional:-->
    <endDate>2013-02-05T00:00:00</endDate>
  </r20:listFazGeneratedReports>
</soapenv:Body>
```

Request Field	Description
<servicePass>	XML structure consists of username and password variables.
<userID>	The administrator user name.

Request Field	Description
<password>	Administrator password options: Enter the administrator password or leave field blank for no password.
<adom>	The ADOMs for which you want to list a generated reports.
<startDate>	The report start date.
<endDate>	The report end date.

The response indicates if the request was successful or if it failed.

#### Example response:

```
<SOAP-ENV:Header/>
<SOAP-ENV:Body>
  <ns3:listFazGeneratedReportsResponse>
    <errorMsg>
      <errorCode>0</errorCode>
      <errorMsg>listFazGeneratedReports successfully</errorMsg>
    </errorMsg>
    <totalNumberExists>48</totalNumberExists>
    <reportList>
      <reportName>S-schedule-utm-reports_t1-2013-02-04-0000</reportName>
      <startTime>2013-02-04T08:00:03Z</startTime>
      <endTime>2013-02-04T08:02:44Z</endTime>
      <reportProgressPercent>100</reportProgressPercent>
      <size>52122</size>
      <formats>PH</formats>
    </reportList>
  </ns3:listFazGeneratedReportsResponse>
</SOAP-ENV:Body>
```

Request Field	Description
<errorMsg>	Indicates if the request was successful or if it failed. The error message consists of the error code and detail.
<errorCode>	Error code and message details: <ul style="list-style-type: none"> <li>-101: Invalid username, password, or ADOM. No reports are available.</li> </ul>
<errorMsg>	<ul style="list-style-type: none"> <li>-104: Cannot get report counts.</li> <li>-106: Not enough memory.</li> </ul>
<totalNumberExists>	All available reports in FortiAnalyzer.
<reportList>	XML structure consists of report name, start time, end time, report progress, size, and format variables.

Request Field	Description
<reportName>	The generated report name. For example, S-schedule-utm-reports_t1-2013-01-24-1022.
<startTime>	Indicates the time the report started.
<endTime>	Indicates the time the report ended.
<reportProgressPercent>	Report running progress; 0 to 100%.
<size>	The generated report size.
<formats>	The report format: <ul style="list-style-type: none"> <li>• P: PDF</li> <li>• H: HTML</li> <li>• T: TXT</li> </ul>

## removeFazArchive

Use this command to remove a FortiAnalyzer archive.

### Example request:

```
<soapenv:Header/>
<soapenv:Body>
  <r20:removeFazArchive>
    <!--Optional:-->
    <servicePass>
      <!--Optional:-->
      <userID>admin</userID>
      <!--Optional:-->
      <password></password>
    </servicePass>
    <!--Optional:-->
    <adom>root</adom>
    <!--Optional:-->
    <devId>FG200B0000000001</devId>
    <!--Optional:-->
    <type>IPS</type>
    <!--Optional:-->
    <fileName>50008:0</fileName>
    <!--Optional:-->
    <checksum>?</checksum>
  </r20:removeFazArchive>
</soapenv:Body>
```

Request Field	Description
<servicePass>	XML structure consists of username and password variables.

Request Field	Description
<userID>	The administrator user name.
<password>	Administrator password options: Enter the administrator password or leave field blank for no password.
<adom>	The ADOM for which you want to remove the FortiAnalyzer archive.
<devId>	The device ID. This is the primary device identifier.
<type>	The archive type. Archive type options: <ul style="list-style-type: none"> <li>• 0: Web</li> <li>• 1: Email</li> <li>• 2: FTP</li> <li>• 3: IM</li> <li>• 4: MMS</li> <li>• 5: Quarantine</li> <li>• 6: IPS</li> </ul>
<fileName>	Shows the name of the file. Note: the file name cannot start with a   or a ~ character.
<checksum>	Checksum is used when the type is Quarantine. Checksum is used instead of filename.

The response indicates if the request was successful or if it failed.

#### Example response:

```

<SOAP-ENV:Header/>
<SOAP-ENV:Body>
  <ns3:removeFazArchiveResponse>
    <errorMsg>
      <errorCode>0</errorCode>
      <errorMsg>removeFazArchive successfully</errorMsg>
    </errorMsg>
  </ns3:removeFazArchiveResponse>
</SOAP-ENV:Body>

```

Request Field	Description
<errorMsg>	Indicates if the request was successful or if it failed. The error message consists of the error code and detail.
<errorCode>	Error code and message details: <ul style="list-style-type: none"> <li>• -101: Invalid username, password, or ADOM. Cannot get the device ID. Cannot get the file name. Cannot get the type. Cannot get the checksum.</li> </ul>
<errorMsg>	<ul style="list-style-type: none"> <li>• -104: Cannot delete content archive file.</li> </ul>

## runFazReport

Use this request to run a report through web services. You need to input the schedule name of the report. In v5.2 Patch Release 2 or later you can add filters to support per user reports. `runFazReport` supports up to 10k filters.

### Example request:

```
<soapenv:Header/>
<soapenv:Body>
  <r20:runFazReport>
    <!--Optional:-->
    <servicePass>
      <!--Optional:-->
      <userID>admin</userID>
      <!--Optional:-->
      <password></password>
    </servicePass>
    <!--Optional:-->
    <adom>root</adom>
    <!--Optional:-->
    <reportTemplate>12</reportTemplate>
    <filter>user=USER00001</filter>
    <filter>user=USER00002</filter>
  </r20:runFazReport>
</soapenv:Body>
```

Request Field	Description
<servicePass>	XML structure consists of username and password variables.
<userID>	The administrator user name.
<password>	Administrator password options: Enter the administrator password or leave field blank for no password.
<adom>	The ADOMs for which you want to run a report against.
<reportTemplate>	The name of the report template.
<filter>	Add filters to create per-user reports.

The response indicates if the request was successful or if it failed.

### Example response:

```
<SOAP-ENV:Header/>
<SOAP-ENV:Body>
  <ns3:runFazReportResponse>
    <errorMsg>
      <errorCode>0</errorCode>
      <errorMsg>runFazReport successfully</errorMsg>
    </errorMsg>
```

```

    <reportTemplate>12</reportTemplate>
  </ns3:runFazReportResponse>
</SOAP-ENV:Body>

```

Request Field	Description
<errorMsg>	Indicates if the request was successful or if it failed. The error message consists of the error code and detail.
<errorCode>	Error code and message details: <ul style="list-style-type: none"> <li>-101: Invalid username, password, or ADOM. Cannot get report schedule name.</li> </ul>
<errorMsg>	<ul style="list-style-type: none"> <li>-104: Cannot get report schedule name from SQL.</li> </ul>
<reportTemplate>	The name of the report template.

## searchFazLog

Use this request to provide raw logs in FortiAnalyzer per conditions set in the request. You need to input the log format, device name, log type, search criteria, start index, and maximum return value in the request message body.

### Example request:

```

<soapenv:Header/>
<soapenv:Body>
  <r20:searchFazLog>
    <!--Optional:-->
    <servicePass>
      <!--Optional:-->
      <userID>admin</userID>
      <!--Optional:-->
      <password></password>
    </servicePass>
    <!--Optional:-->
    <adom>root</adom>
    <!--Optional:-->
    <content>logs</content>
    <!--Optional:-->
    <format>rawFormat</format>
    <!--Optional:-->
    <deviceName>FG200B-1</deviceName>
    <logType>traffic</logType>
    <!--Optional:-->
    <searchCriteria>srcip=10.0.0.1</searchCriteria>
    <maxNumMatches>30</maxNumMatches>
    <startIndex>1</startIndex>
    <checkArchive>0</checkArchive>
    <!--Optional:-->
    <DLPArchiveType>1</DLPArchiveType>
    <!--Optional:-->
    <compression>tar</compression>
  </r20:searchFazLog>

```

&lt;/soapenv:Body&gt;

Request Field	Description
<servicePass>	XML structure consists of username and password variables.
<userID>	The administrator user name.
<password>	Administrator password options: Enter the administrator password or leave field blank for no password.
<adom>	The ADOMs for which you want to search logs.
<content>	The log contents you want to search. Log content options: <ul style="list-style-type: none"> <li>• 0: Logs</li> <li>• 1: Content logs</li> <li>• 2: Local logs</li> </ul>
<format>	The log formats to display. Log format options: <ul style="list-style-type: none"> <li>• 0: Raw</li> <li>• 1: CSV</li> </ul>
<deviceName>	The device name you want to search logs from.
<logType>	Type of logs you want to search. Log type options: <ul style="list-style-type: none"> <li>• 0: Event</li> <li>• 1: Traffic</li> <li>• 2: Attack</li> <li>• 3: Antivirus</li> <li>• 4: Web logs</li> <li>• 5: IM</li> <li>• 6: Email</li> <li>• 7: Content</li> <li>• 8: History</li> <li>• 9: Generic</li> <li>• 10: VoIP</li> <li>• 11: DLP</li> <li>• 12: Application Control</li> <li>• 13: Network Scanning</li> </ul>
<searchCriteria>	The search criteria used to search logs. For example, vd-root.
<maxNumMatches>	The maximum number of matches to display from the search results.
<startIndex>	The start index of the matched logs.
<checkArchive>	This variable is not used. Always set the value to 0.

Request Field	Description
<DLPArchiveType>	The DLP archive type. DLP archive type options: <ul style="list-style-type: none"> <li>• 0: Web</li> <li>• 1: Email</li> <li>• 2: FTP</li> <li>• 3: IM</li> <li>• 4: MMS</li> <li>• 5: Quarantine</li> <li>• 6: IPS</li> </ul>
<compression>	The compression type of the report that will be returned by this command. Compression options: <ul style="list-style-type: none"> <li>• 0: tar</li> <li>• 1: gzip</li> </ul>

The response will contain the logs that match the criteria specified in the request.

#### Example response:

```
<SOAP-ENV:Header/>
<SOAP-ENV:Body>
  <ns3:searchFazLogResponse>
    <errorMsg>
      <errorCode>0</errorCode>
      <errorMsg>searchFazLog successfully</errorMsg>
    </errorMsg>
    <totalResultsFound>300</totalResultsFound>
    <matchesReturned>16</matchesReturned>
    <startIndex>1</startIndex>
    <logs>
      <data>

        </data>
      </logs>
    </ns3:searchFazLogResponse>
  </SOAP-ENV:Body>
```

Request Field	Description
<errorMsg>	Indicates if the request was successful or if it failed. The error message consists of the error code and detail.

Request Field	Description
<errorCode>	Error code and message details: <ul style="list-style-type: none"> <li>-101: Invalid username, password, or ADOM. Cannot get device name. Cannot get search criteria. Incorrect DLP archive type.</li> <li>-102: Cannot find device name on system.</li> <li>-104: Cannot find logs with criteria.</li> <li>-106: Not enough memory.</li> </ul>
<errorMsg>	
<totalResultsFound>	
<matchesReturned>	
<startIndex>	The start index in the request.
<logs>	Log data will be displayed under this element.
<logEntry>	Displays log data.

## setFazConfig

Use this request to set the FortiAnalyzer configuration. You can set either partial or full configuration.

### Example request:

```

<soapenv:Header/>
<soapenv:Body>
  <r20:setFazConfig>
    <!--Optional:-->
    <servicePass>
      <!--Optional:-->
      <userID>admin</userID>
      <!--Optional:-->
